AUTHOR INDEX

Bosley, D. E., 77
Chapman, B. M., 189
Feughelman, M., 189
Geil, P. H., 109
Gillespie, J. M., 201
Hearle, J. W. S., 215
Hosemann, R., 1
Kassenbeck, P., 49
Keith, H. D., 59
Lindenmeyer, P. H., 145
Müller, F. H., 61
Samuels, R. J., 253
Sprague, B. S., 159
Statton, W. O., 117
Stein, R. S., 185
Taylor, C. A., 19
Woods, H. J., 37

SUBJECT INDEX

Anisotropy and uniaxial stretching, 61
Chain folding, polymer, molecular theory of, 145
Crystalline polymers, physical studies of rates of deformation of, 185
Crystallization, polymer, 109
  spherulitic, in high polymers, 59
Deformation, rates of, of crystalline polymers, physical studies of, 185
Deformation morphology, spherulite structure, and mechanical properties of isotactic polypropylene fibers, 253
Diffraction, x-ray, and electron microscopy of keratin fibers, 37
Diffraction photographs, x-ray, of fiber structures, optical diffraction techniques for interpreting, 19
Diffraction techniques, optical, for interpreting x-ray diffraction photographs of fiber structures, 19
Diffusion of dyes, relationship of fibers structure to, 159
Dyes, diffusion of, relationship of fibers structure to, 159
Electron microscopy, applied to high polymers, application of histochemical techniques in, 49
  and x-ray diffraction of keratin fibers, 37
High-sulfur proteins of α-keratins, relation to fiber structure and properties, 201
Histochemical techniques, application of, in electron microscopy as applied to high polymers, 49
Isotactic polypropylene fibers, spherulite structure, deformation morphology, and mechanical properties of, 253
α-Keratin, structure of, derived from mechanical properties, 189
Keratin fibers, x-ray diffraction and electron microscopy of, 37
α-Keratins, high-sulfur proteins of, relation to fiber structure and properties, 201
Length changes, fiber, and relation to fiber structure, 77
Linear synthetic high polymers, molecular and supramolecular paracrystalline structure of, 1
Mechanical properties, spherulite structure, and deformation morphology of isotactic polypropylene fibers, 253
  structure of α-keratin derived from, 189
Mechanics, structural, of fibers, 215
Microscopy, electron, applied to high polymers, application of histochemical techniques in, 49
  electron, and x-ray diffraction of keratin fibers, 37
Molecular and supramolecular paracrystalline structure of linear synthetic high polymers, 1

Molecular theory of polymer chain folding, 145
Molecules in fibers, orientation of, 117
Morphology, deformation, spherulite structure, and mechanical properties of isotactic polypropylene fibers, 253
Optical diffraction techniques for interpreting x-ray diffraction photographs of fiber structures, 19
Orientation of molecules in fibers, 117
Paracrystalline structure, molecular and supramolecular, of linear synthetic high polymers, 1
Photographs, x-ray diffraction, of fiber structures, optical diffraction techniques for interpreting, 19
Physical studies of rates of deformation of crystalline polymers, 185
Polypropylene fibers, isotactic, spherulite structure, deformation morphology, and mechanical properties of, 253
Proteins, high-sulfur, of α-keratins, relation to fiber structure and properties, 201
Rates of deformation of crystalline polymers, physical studies of, 185
Spherulite structure, deformation morphology, and mechanical properties of isotactic polypropylene fibers, 253
Spherulitic crystallization in high polymers, 59
Stretching, uniaxial, and anisotropy, 61
Synthetic linear high polymers, molecular and supramolecular paracrystalline structure of, 1
Uniaxial stretching and anisotropy, 61
X-ray diffraction and electron microscopy of keratin fibers, 37
X-ray diffraction photographs of fiber structures, optical diffraction techniques for interpreting, 19
